

AI Intern Assessment – patrakaar.ai

Instructions

- Complete this assignment within 48 hours
- Focus on working solution + clarity, not perfection
- Submit via GitHub repository link
- Add a README with setup instructions

Dataset

You are given a dataset containing multiple text articles with fields like:

- title
- content

Part 1: Text Processing (Core Task)

Q1. Summarization

Generate a 2–3 line summary for each article.

Question: What approach did you use for summarization? (model / logic)

Q2. Keyword / Tag Extraction

Extract 3–5 relevant tags/keywords per article.

Question: How are you selecting these keywords?

Q3. Topic Classification

Assign one category to each article from below:

- Politics
- Business
- Technology
- Sports
- Entertainment

Question: How did you decide the topic? (model / rules / logic)

Part 2: Structured Output

Q4. Final Output File

Create a structured dataset with: title, summary, tags, topic

Question: How did you ensure consistency in output format?

Part 3: API Development (Important)

Q5. Build an API using FastAPI

Create an endpoint: GET /articles

Should return all processed articles in JSON format

Q6. Filtering (Bonus)

Add filtering support: GET /articles?topic=Technology

Question: How did you implement filtering?

Part 4: Basic UI

Q7. Streamlit Interface

Display articles table and topic filter

Question: What improvements would you add if given more time?

Part 5: Reflection

Q8. Challenges

What challenges did you face?

Q9. Improvements

If given more time, what would you improve?

Q10. Real-World Thinking

How would you scale this system for large datasets?

Submission Requirements

- GitHub repository
- README (setup + explanation)
- Output file (CSV/JSON)

- Screenshots

Important Notes

- Keep your solution simple and functional
- Avoid overengineering
- Clarity > complexity
